If you're shopping for the UGREEN HDMI Switch 5 in 1 Out at £29.99, the first thing to know is that not every alternative is a like-for-like replacement. Some are cheaper HDMI switches with fewer ports, while others are useful TV setup upgrades that may solve the real problem better than another HDMI box. Here's how the main options compare in practical terms.

1) UGREEN HDMI Switch 3 in 1 Out – £13.78 This is the closest direct alternative if you still want a proper HDMI switch but don't actually need five inputs. At £13.78, it's £16.21 cheaper than the 5-in-1 model, which is a huge saving if your setup is just a PS5, a Fire Stick, and maybe one more device. You still get 4K@60Hz, HDR10+, Dolby Atmos support, HDCP 2.2, and remote switching, so in day-to-day use the core experience is very similar.

The main trade-off is obvious: three inputs instead of five. That sounds small, but in real life it matters if you've got a console, Blu-ray player, streaming stick, and a TV box all competing for one HDMI port. If you outgrow it, you'll be back shopping again. Build quality should be broadly in the same UGREEN family, so you're not really downgrading on reliability; you're just choosing a simpler device. Verdict: this is the best value pick for most people who only need 2–3 devices and want to save money without sacrificing picture quality.

2) Indoor TV Aerial – Freeview Digital Antenna with Built-In 4G-Filter Signal Booster – £33.25 This isn't an HDMI switch at all, but it can be a smarter alternative if your real issue is that you want more TV channels without paying for a box or streaming bundle. At £33.25, it's £3.26 more expensive than the UGREEN HDMI switch, so you're paying a little extra for a completely different benefit: access to Freeview channels via aerial rather than juggling HDMI sources.

The practical upside is big for UK viewers. If you mainly watch live TV, BBC, ITV, Channel 4, Channel 5, and the usual Freeview extras, a good indoor aerial can remove the need for another device

entirely. The built-in 4G filter is useful because it can help reduce interference from mobile signals, which is a common issue in some homes. Build quality on indoor aerials is usually more about how well they're tuned and positioned than how "premium" they feel physically, so the magnetic base and USB power are the real selling points here. Verdict: choose this if you want cheaper TV access rather than more HDMI inputs.

3) Indoor TV Aerial – Freeview Antenna with Signal Booster – £29.75 At £29.75, this is priced almost identically to the UGREEN HDMI switch, costing just 24p less. That makes it an interesting comparison because it forces you to ask what problem you're actually solving. If your setup already has enough HDMI ports, this aerial may be the better buy because it adds Freeview reception and can help you cut down on subscriptions. If you already have strong aerial reception, though, it won't help with device switching at all.

Compared with the UGREEN switch, the feature set is obviously unrelated: no remote source switching, no 4K HDMI pass-through, no use for game consoles or Blu-ray players. But in a UK home, a decent aerial can be more valuable than another HDMI gadget if you're trying to build a low-cost TV setup around Freeview. Build quality is likely to be fine for the price, and the 4.8★ rating suggests buyers are happy with performance. Verdict: pick this if you need better TV reception and want a simple, subscription-free viewing setup.

4) Amazon Basics TV Wall Bracket for 26-55 inch TVs – £19.93 This wall bracket is £10.06 cheaper than the UGREEN HDMI switch, but again it's solving a totally different problem. If your TV is awkwardly placed, taking up too much space, or you want a cleaner living room setup, a wall mount can be a much better use of money than another HDMI switch. The Amazon Basics bracket supports tilting and swivelling, which is the practical feature that matters most: you can angle the screen for better viewing and reduce glare from windows or lamps.

In terms of build quality, Amazon Basics products are usually decent rather than fancy, and the 36kg weight limit plus VESA support up to 400x400mm covers a lot of mainstream TVs. The trade-off is that installation takes effort and you need suitable wall type, fixings, and a bit of confidence with DIY. It doesn't help with source switching or picture format compatibility, so this is only a "better alternative" if the actual pain point is your TV placement, not your HDMI port count. Verdict: choose this if you want a neater setup and better viewing angles, not more inputs.

5) VonHaus TV Wall Bracket for 37-85" Screens – £18.99 At £18.99, the VonHaus bracket is £11.00 cheaper than the UGREEN HDMI switch, and it offers a much higher maximum weight capacity at 70kg with a slim profile. That makes it a stronger option for larger TVs or anyone who wants the screen close to the wall for a more premium look. The included spirit level is a genuinely useful touch because it makes installation easier and reduces the chance of a wonky mount.

Compared with the UGREEN switch, there's no overlap in function, but the practical impact can be bigger than you'd think. A well-mounted TV frees up furniture space, looks tidier, and can make a soundbar or console setup feel more intentional. Build quality should suit the price well, and VonHaus generally has a decent reputation for DIY home products. The main downside is the same as any wall bracket: you need to install it properly, and it only makes sense if you're happy to mount the TV.

Verdict: this is a strong choice for larger TVs and anyone prioritising a cleaner room over extra HDMI switching.

Which alternative is best overall? If you want the closest direct replacement, the UGREEN HDMI Switch 3 in 1 Out is the best-value alternative by far. It keeps the same 4K@60Hz, HDR, and remote switching features but costs less than half the price. If you're not actually short on HDMI ports and just want better TV access or a tidier setup, then the Freeview aerials or wall brackets may be the smarter spend.

A good rule of thumb: buy an HDMI switch if you're running out of ports, buy a Freeview aerial if you want more channels without subscriptions, and buy a wall mount if your main problem is space or viewing angle. That way, you're solving the right issue instead of just buying another box.

Still Buy the Original If...

Choose the original UGREEN 5-in-1 switch if you regularly juggle four or five HDMI devices and want to keep 4K@60Hz, HDR and remote switching in one tidy unit. It's the right pick for a busier home cinema or gaming setup where running out of ports is the real problem.
